

# Fast Lane: Where Code (Apple) Meets Network Infrastructure (Cisco)

Cisco DevNet Webinar Series

Speaker: Ashutosh Malegaonkar | Cisco DevNet  
Hostess: Kara Sullivan | Cisco Networking Academy  
30 November 2017

# Welcome to the 4th session of the Cisco DevNet webinar series

- Use the Q and A panel to ask questions.
- Use the Chat panel to communicate with attendees and panelists.
- A link to a recording of the session will be sent to all registered attendees.
- Please take the feedback survey at the end of the webinar.

# Before We Get Started

## Today's Presentation:

- Difficulty Level: Medium
- Recommended Background: CCNA 1 with Coding

# Cisco DevNet Series

- 1 Intro to Software & Programmability (Available On-Demand)
- 2 Intro to Coding (Available On-Demand)
- 3 Intent Networks (Available On-Demand)
- 4 Fast Lane: Where Code (Apple) Meets Network Infrastructure (Cisco) – Today!
- 5 **APIs with Cisco Spark – 14 December, 9:00 a.m. PST**  
**Register @ <http://bit.ly/APIsWithSpark>**

All Series Details can be Found @ <http://bit.ly/DevNetSeries>

# Where Code (Apple) Meets Network Infrastructure (Cisco)

Cisco DevNet Series: Fast Lane

Ashutosh Malegaonkar  
Cisco DevNet  
November 2017

# Agenda

- Digital transformation driving programmable networks
- Fast lane technology overview
  - Quick overview of QoS
  - Fast lane Technology and demo
- DevNet Fast lane validation labs
- Summary and Opportunities

# Personal Transformation

# My Personal Transformation

Device Drivers -  
Embedded Systems

Voice and Video Stacks  
(Middleware)

Web and Cloud  
Applications

“Every next level of your life will demand a different version of you.  
Keep Re-Inventing Yourself”

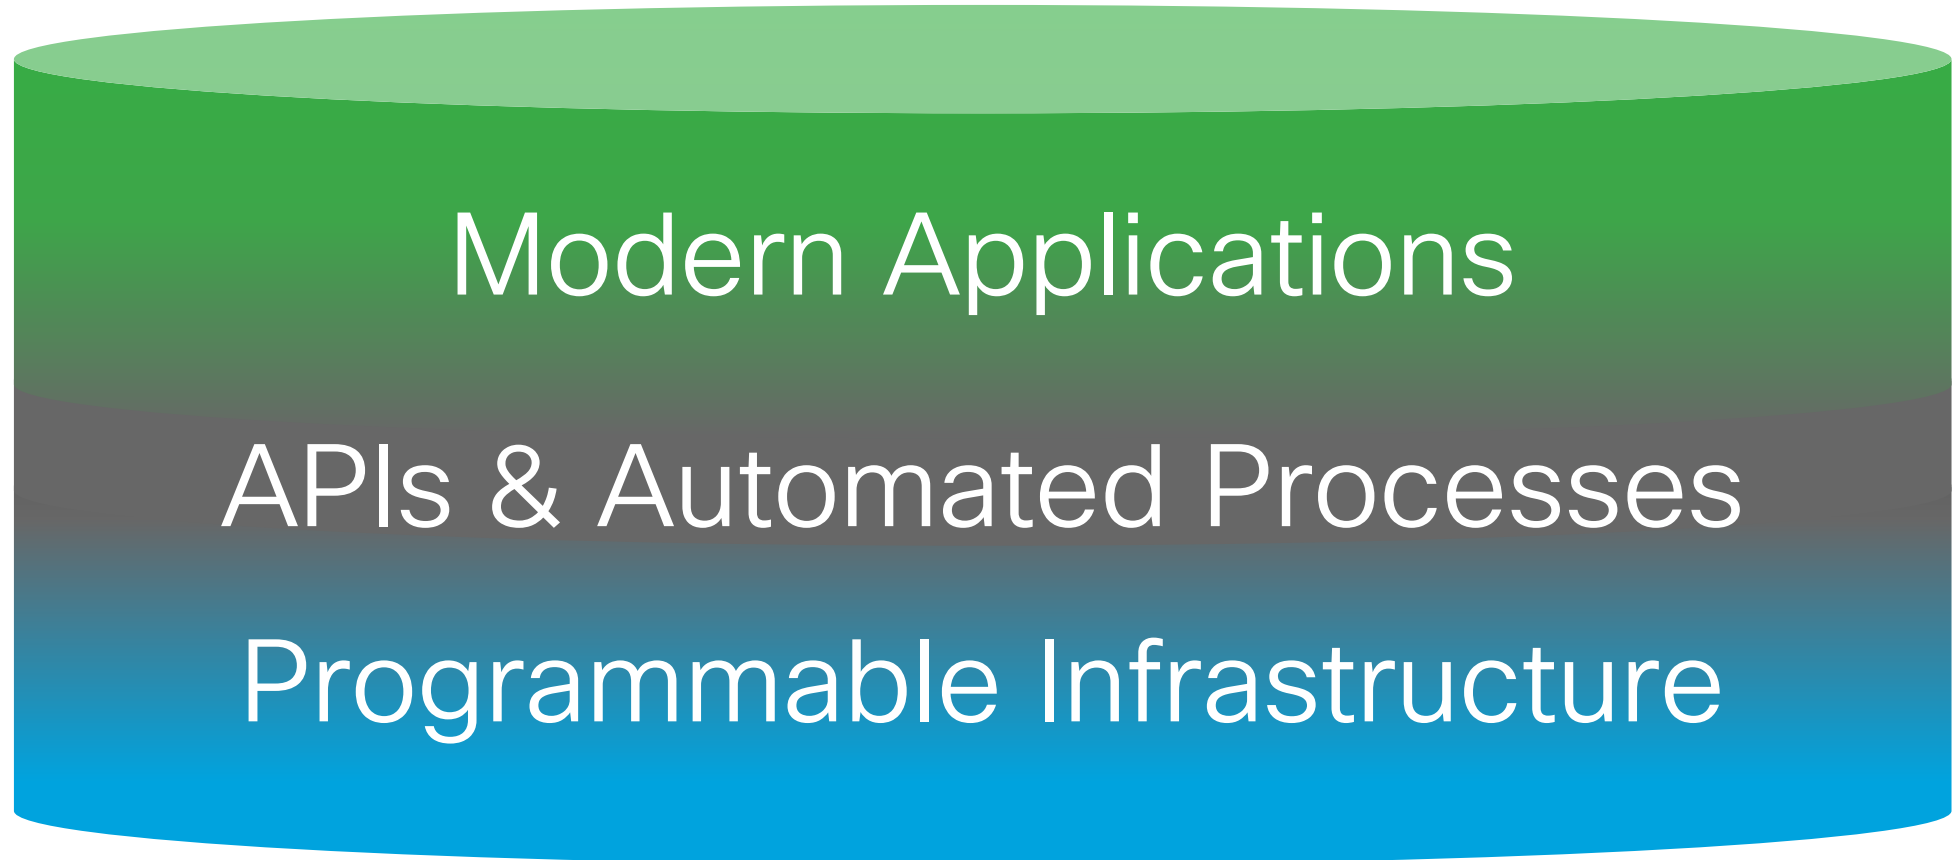

# Digital Transformation and Programmable Networks

# Digital transformation needs an integrated approach

Where modern apps meet programmable infrastructure

# Modern Applications

Network  
Performance

Location Based  
Services

Security

NetDevOps

Multi Cloud

# Network Performance

How can one guarantee the quality of the modern app performance?

# Quality Performance Use Cases

## Stadiums

2

## Retail Augmented Reality

Smart shopping

3

## Casinos

High touch  
gaming

4

## Kiosks

Point of Sale  
Machines  
Info Kiosks

5

# Typical Healthcare Environment

A photograph of two male doctors in white lab coats walking through a hospital hallway. The doctor on the right is looking down at a tablet computer he is holding. The doctor on the left is looking towards him. The background shows a modern hospital interior with large windows and a glass door. A wheelchair is partially visible in the lower right corner.

## Customer Example

- Hospitals provide Public Wi-Fi and need to operate business critical apps with top performance

## Key Business Challenges

- Doctors, Nurses, Clinicians require to communicate with each other and the patient devices
- Little user intervention required to gain access
- Seamless and consistent experience on any device and any location

# Retail Environment

## Customer Example

- Retailer provide Public Wi-Fi and need to operate business critical apps with top performance

## Key Business Challenges

- Retailers are looking to provide new experiences to shoppers who can do comparative shopping etc
- Seamless and consistent experience on any device and any location

# What is Fast Lane?

# What is Fast Lane

Fast lane enables business applications running on Apple iOS devices to prioritize their traffic [Quality of Service (QoS) ] when used on Cisco Wi-Fi networks

# Quality of Service Refresher (QoS)

# Quality of Service (QoS)

“QoS mechanisms are designed to provide specific applications with guaranteed or consistent service in the absence of optimal bandwidth conditions”

There are three key methodologies for implementing QoS:

- Best-Effort
- Integrated Services (IntServ)
- Differentiated Services (DiffServ)

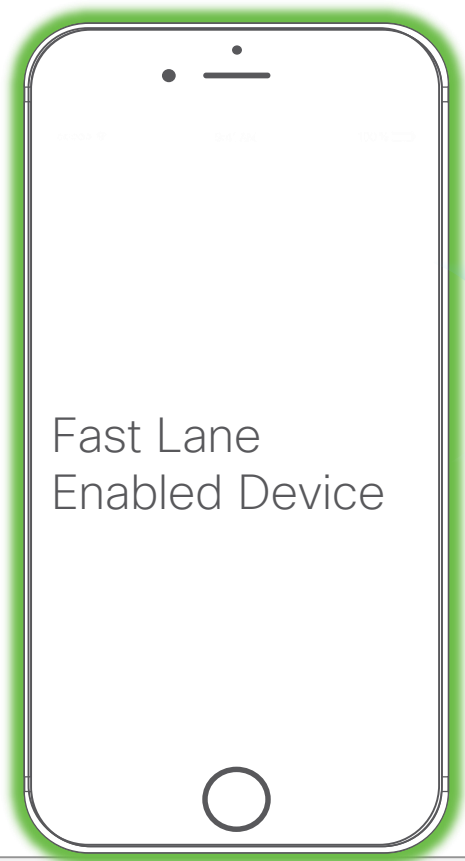

# QoS Refresher - Types

- **Best-Effort QoS** is essentially *no* QoS. Traffic is routed on a first-come, first-served basis. Sensitive traffic is treated no differently than normal traffic.
- **Integrated Services (IntServ) QoS** is also known as *end-to-end* or *hard* QoS. IntServ QoS requires an application to *signal* that it requires a specific level of service. *Every* device end-to-end must support the IntServ QoS protocol(s).
- **Differentiated Services (DiffServ) QoS** - Traffic types are organized into specific **classes**, and then **marked** to identify their classification. **Policies** are then created on a *per-hop basis* to provide a specific level of service, depending on the traffic's classification.

# Fast Lane Deep Dive

# Fast Lane Details

Special Handshake

Enable Fast Lane

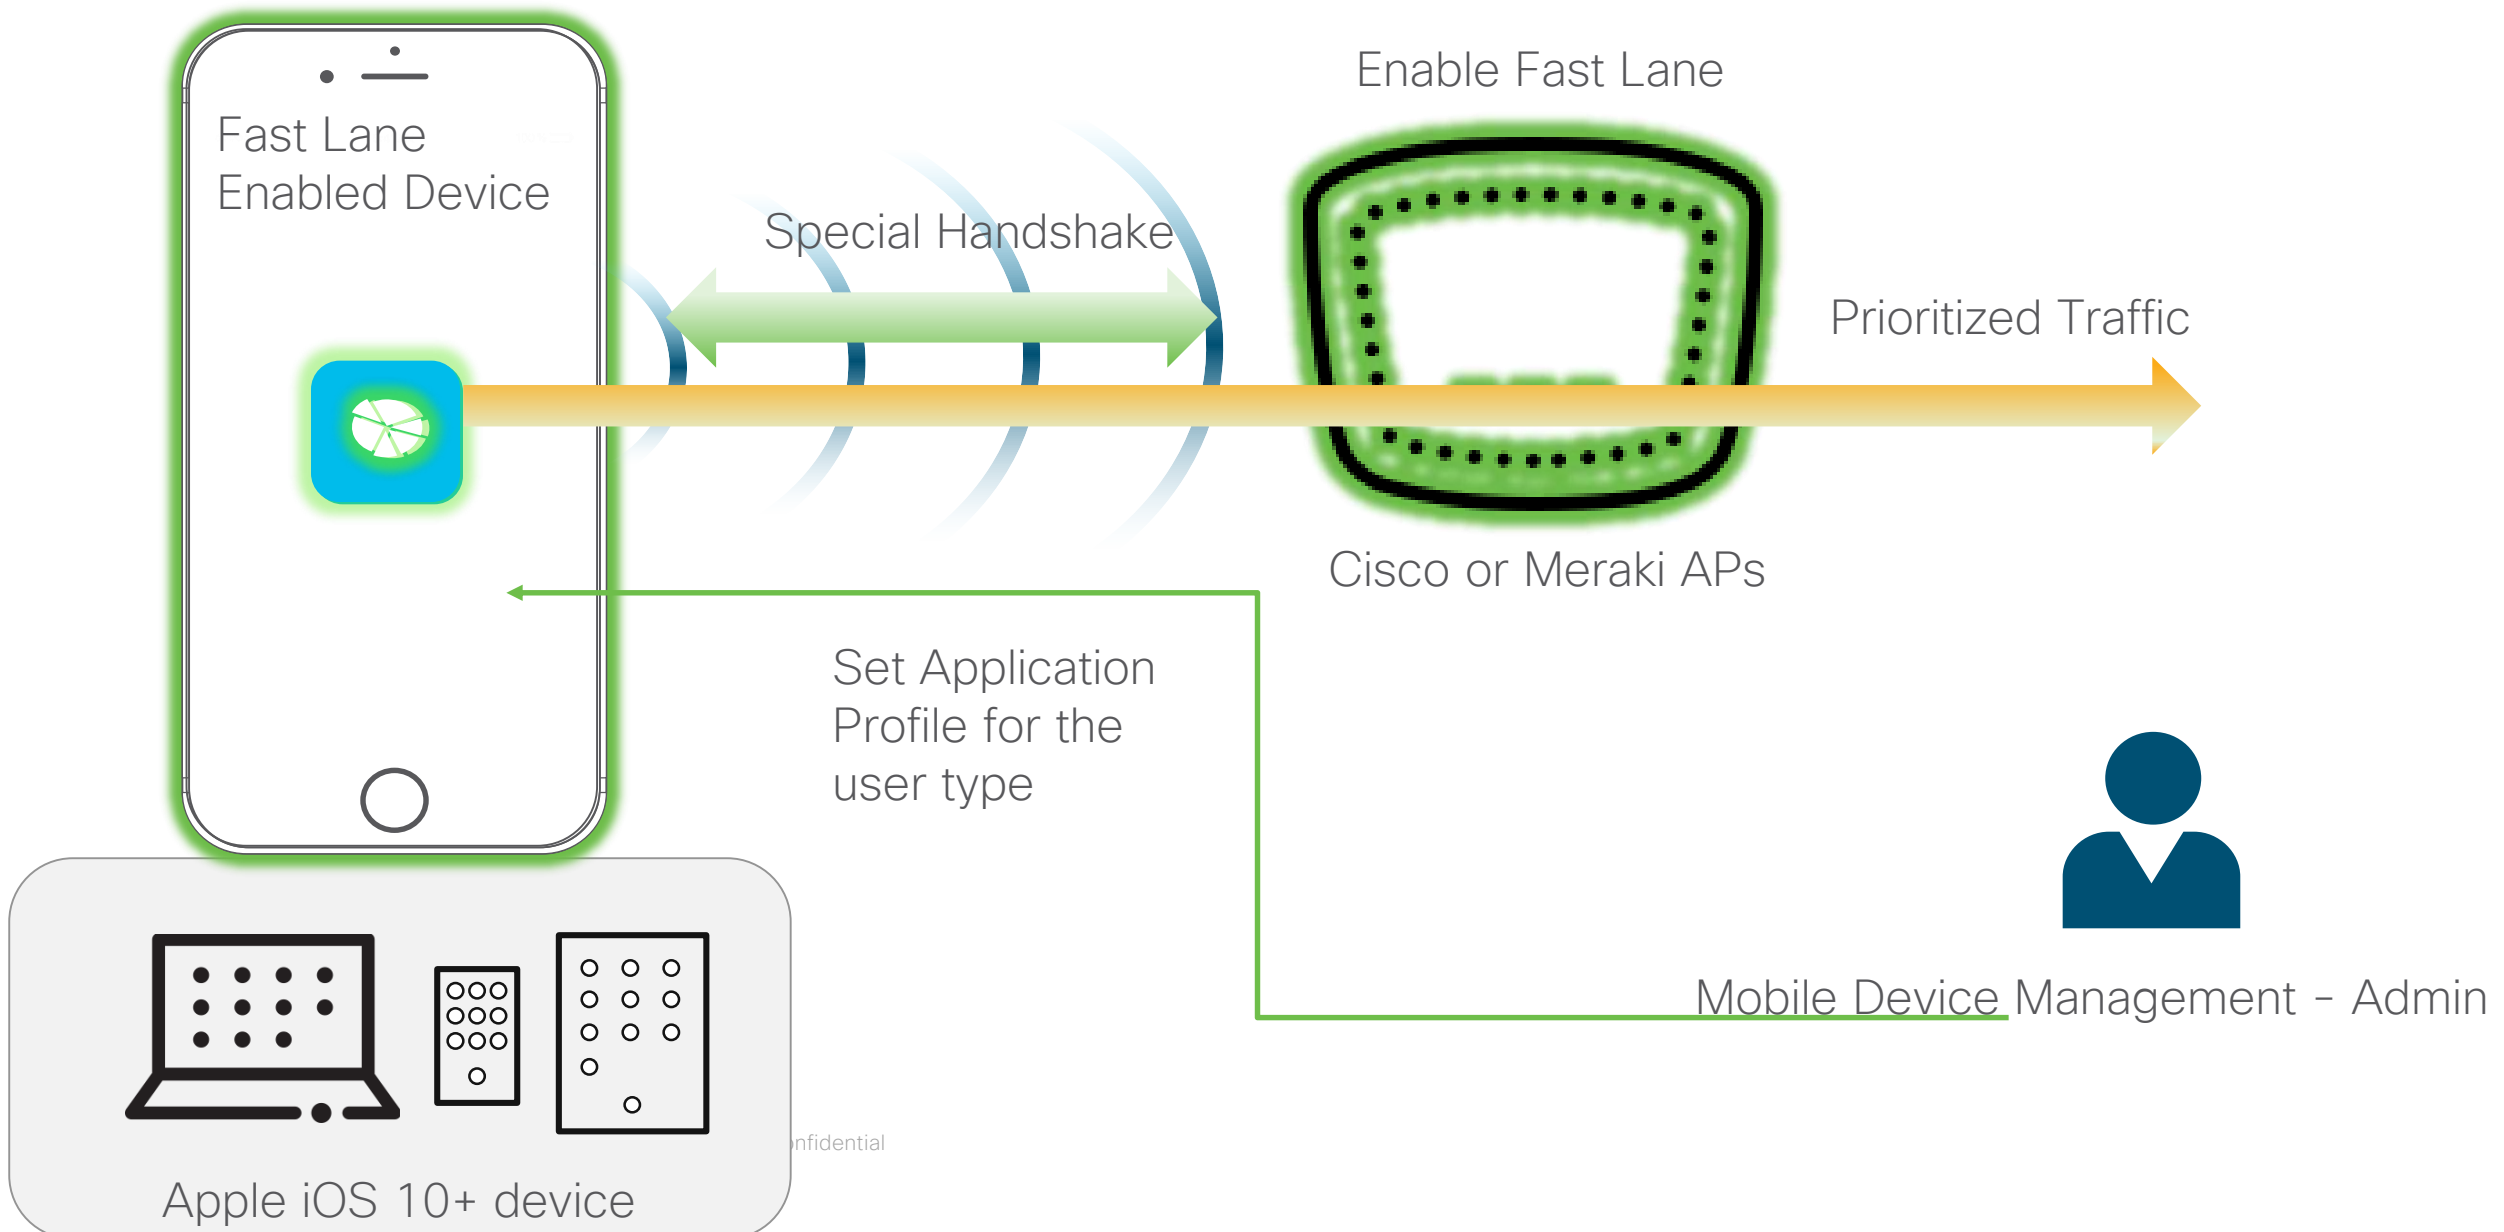

Cisco or Meraki Access Point (AP)

Apple iOS 10+ device

Confidential

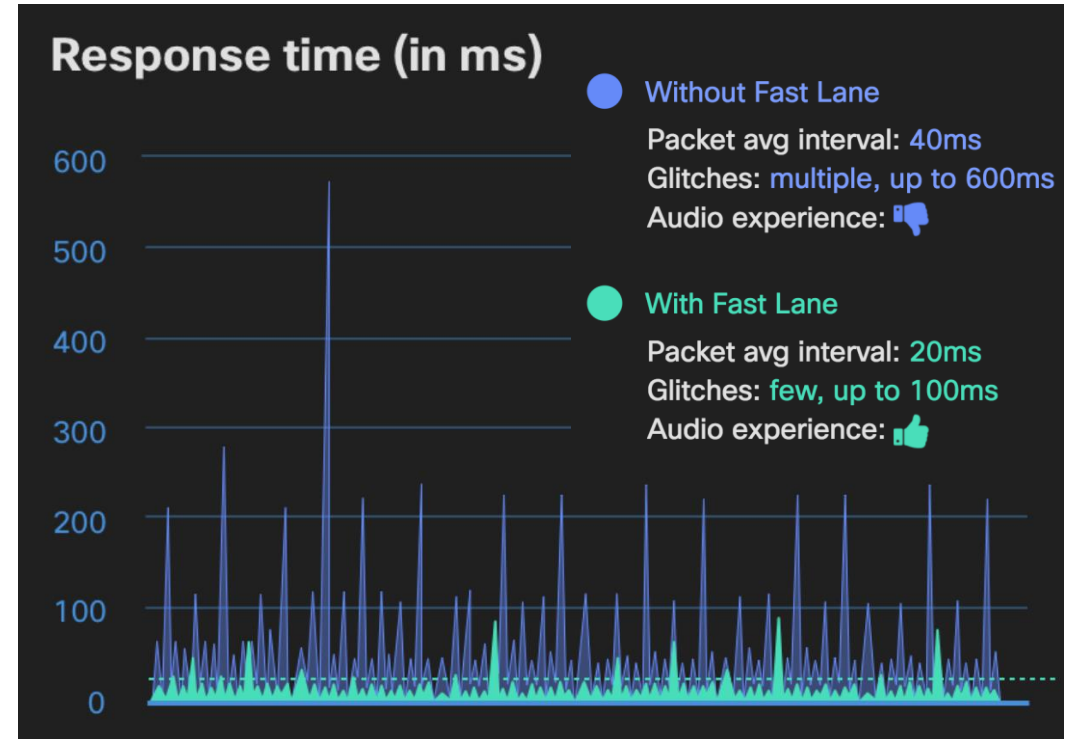

# Fast Lane Details

# Developers work with DevNet to Fast lane enable to:

- Understand **traffic types** of their application
- Understand the required **iOS code changes**
- **Test their application** on Cisco Infrastructure – we help developers validate apps!

# Let's Fast Lane Enable the Cisco Spark App

The Cisco Spark App does the following -

- Real-time chat
- Real-time Voice calls
- Real-time Video calls
- Signaling
- Content upload

# Understanding Traffic Types

Real time Interactive Voice

Real time Interactive Video

Best Effort ( Real time Data)

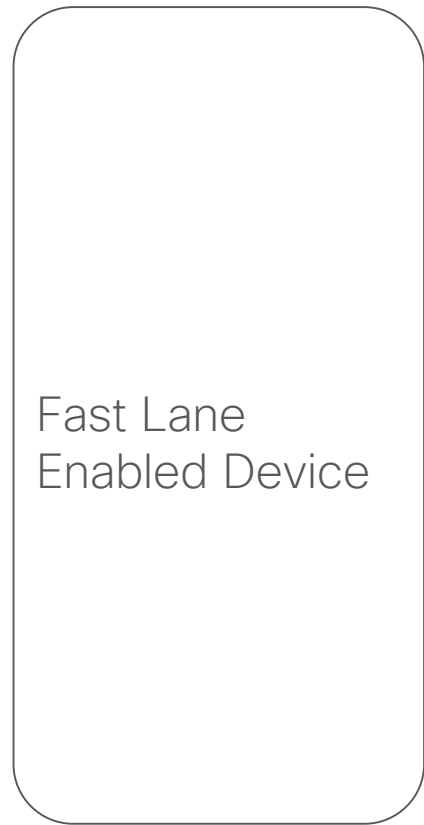

Background ( backups, media uploads etc)

# iOS – Service Types in different Frameworks

You set the service type property by using the following networking APIs:

CFReadStream	kCFStreamNetworkServiceType
NSStream	NSStreamNetworkServiceType
Stream	StreamNetworkServiceType
UDP sockets	SO_NETSERVICE_TYPE

# DevNet Fast Lane Validation Labs

# Fast Lane Validation Program

# DevNet Fast Lane Validation Lab

The goal of this lab is to do the following:

- **Validate** if your app running on an iOS 10 device honors the Fast lane profile as well as checks with and without the application name being configured (apps in the list get QoS, apps outside the list are treated as Best Effort).
- Test for the validity of the **traffic generated by the app** to the actual tag that is marked on the traffic flow.
- Improve **user experience** (performance) of your app. Check for fewer drops and lower latency in a congested network.

# Verifying QoS – Whitelist Traffic

# Summary

# Careers where Fast Lane technology is relevant

Marks Application  
Traffic based on iOS  
10 API

**App Developer**

Upgrades network  
devices.  
  
Enables Fast Lane of  
required SSIDs

**Network Admin**

Creates and  
manages Enterprise  
App Profiles  
  
Keeps Devices up-  
to-date

**Mobile Device Mgr.**

Understands App  
functionality  
  
Understands QoS

**Informed End User**

# Summary

- Fast lane enables business applications running on Apple iOS devices to prioritize their traffic [Quality of Service (QoS) ] when used on Cisco Wi-Fi networks
- Simple setup on Cisco networks, turned on by default in Meraki.
- DevNet has validation Labs where any App developer or company can validate their app for free.
- DevNet has experts who are willing to consult you to enable your iOS app

# Next Steps
